Web Development

MERN Stack

TRACK 02

AI / ML

Full Stack AI Engineering

Duration: 6 Weeks | Tasks: 5 Per Track | Submission: Weekly via GitHub

This document is confidential and issued to selected BetaBytez interns only

GENERAL INSTRUCTIONS

Welcome to BetaBytez Summer Internship 2026

Congratulations on being selected for the BetaBytez Summer Internship Program 2026. You have been chosen based on your skills, potential, and the quality of your application. This document is your complete guide it contains everything you need to understand the program structure, how tasks work, how to submit your work, and what is expected of you as a BetaBytez intern.

Read this entire document carefully before starting your first task. Every section contains important information that will affect your performance and final evaluation.

Program Structure

Duration	6 Weeks
Tasks	5 Tasks per Track (submitted weekly)
Tracks	Web Development (MERN Stack) AI/ML (Full Stack)
Mode	Remote
Final Submission	Week 6 — Capstone Project (Task 5)

How Tasks Work

All five tasks for your track are provided in this document. You will receive them all at once but you must complete and submit them one per week, in order. Do not skip ahead. Each task builds on the skills and knowledge of the previous one.

Think of this internship as a progressive learning journey. Task 1 is your foundation. Task 5 is your capstone a complete, portfolio-ready project that you will be able to showcase in interviews and on your resume.

Submission Rules

Every week, you will submit your work by providing the following details in the shared BetaBytez Submission Document:

- Your Full Name
- Your Domain (Web Development or AI/ML)
- Task Name (e.g., Task 1 — Static Frontend)

- GitHub Repository Link for that task

Your GitHub repository must meet the following standards for your submission to be accepted:

1. The repository must be public so it can be reviewed.
2. It must contain a clear README file explaining: what the project does, how to run it, and what technologies were used.
3. Commit history must show regular, progressive commits — not a single upload at the end. We check this.
4. Code must be your own. Copied or fully AI-generated code without genuine understanding will result in disqualification.
5. Each task must be in its own separate repository — do not mix multiple tasks in one repo.

Weekly Submission Deadline

Each task must be submitted by Sunday 11:59 PM of the respective week. Late submissions will not be accepted unless prior communication has been made with the BetaBytez team.

What Happens If You're Stuck

Getting stuck is a normal part of learning. Here is the correct approach when you face difficulty:

6. Read the task description and deliverables again carefully most confusion comes from not reading thoroughly.
7. Search for solutions using official documentation, Stack Overflow, or YouTube tutorials relevant to the specific concept.
8. Use AI tools (ChatGPT, Claude, Copilot) to understand concepts but never to generate entire solutions for you.
9. If you are still stuck after genuine effort, reach out to the BetaBytez team via the WhatsApp Channel with a specific question. Vague messages like 'I don't understand Task 2' will not be responded to.

Evaluation Criteria

Your work will be evaluated on the following:

- Functionality — does the project work as described?
- Code Quality — is the code clean, readable, and well-organized?
- Understanding — can you explain your decisions if asked?
- Consistency — did you commit regularly throughout the week?
- Documentation — is your README clear and complete?

Certification & Offer Letter

Interns who successfully complete all five tasks and deliver a working capstone project in Week 6 will receive:

- Official BetaBytez Internship Completion Certificate
- Personalized Letter of Recommendation signed by the Founder
- Priority consideration for future paid remote work opportunities with BetaBytez

Interns who do not complete the program, miss multiple submissions without communication, or submit plagiarized work will not receive certification.

A Note on Professionalism

You are not just an intern you are a representative of BetaBytez during this program. Be professional in all communication, be honest about your progress, and treat deadlines seriously. This internship is designed to prepare you for the real world and in the real world, accountability and consistency matter more than raw talent.

We are genuinely excited to have you on board. Let's build something great together.
